Within the Northeast Kingdom are remnants of a Revolutionary War era military road. Proposed and started in 1776 by Colonel Jacob Bayley, continued in 1779 and later abandoned by General Moses Hazen, the road — and what remains of it — extends from Wells River in a northwesterly direction to what is now known as Hazen’s Notch.

For sure, exploration of the road is accomplished far better by mountain bike and hybrid than by motor vehicle. Small details, historical markers, grave sites and monuments that still recall the events of long ago may escape the eye when barreling along in a car but will not be missed by bike. As inveterate touring cyclist Josh Lehman reminds us, “bicyclists travel fast enough to span the forest but slow enough to spot the trees.”

Much of the original route can be followed using existing roads, the majority of which remain unpaved. Indeed, the character of the original road as described in the 1959 Northeast Vermont Development Association (NVDA) booklet, Bayley-Hazen Military Road – 1776 & 1779, aptly describes what cyclists will find today.

“It makes no concessions to comfort or convenience, and very few even to the law of gravity. It goes as straight as possible, regardless of grade, like an old Roman road, but by no means regardless of that bogey of the early road builders in New England. In general it keeps on the ridge-tops, dodging the wet spots as much as possible, crossing brooks and larger streams at right angles, almost never following them.”

Sound like fun? Then let’s get started in search of Bayley Hazen.
The history of the Bayley-Hazen Military Road begins with the ill-starred campaign of 1775-1776 during which Benedict Arnold and Richard Montgomery attempted to capture Canada. The American army urgently needed reinforcements and supplies to continue the siege of Quebec, and Bayley, head of the frontier militia and a resident of Newbury, Vermont, repeatedly wrote to General George Washington urging upon him the importance of constructing a new road that would shorten existing supply routes. Washington, determined to act without the approval of Congress, approved construction of the road on April 29, 1776 aware of the critical situation at Quebec, but equally aware that a road to Canada could just as easily facilitate an attack of British troops from the north.

In mid-1776, the campaign in Canada foundered. Washington instructed Bayley to abandon work on the road which had reached a point about six miles north of Elkin’s place in Peacham. There construction lay dormant until April, 1779 when General Moses Hazen of Haverhill, Massachusetts received orders to complete the road in anticipation of another Canadian campaign.

Hazen’s men built a blockhouse on Cabot Plains and as the road progressed, they built another six miles farther on in Walden. Still another blockhouse was built at Caspian Lake near Greensboro. By late summer, Hazen had reached the notch that now bears his name in the Green Mountains near Westfield where work was halted still some forty miles short of the road’s intended destination, St. Johns, Canada.

As a military achievement, the Bayley-Hazen road was not a great one. Instead, it was more of an aggravation to the settlers of Peacham, Ryegate and Newbury, as it could be traveled both ways and the British conducted raids down the road from time to time, as anticipated. In September 1781, two members of an American scouting party were killed near the block house on Caspian Lake. A memorial to this event can be seen today.

For convenience as well as for tour planning, we’ve divided our route into three “do-able” sections. The first section goes from Wells River to Danville, a distance of about 22 miles. Section two connects Danville with Craftsbury, a distance of 30 miles. The final leg of the route is 37 miles and will take you from Craftsbury to Montgomery. Accommodations and services may be found at the beginning and end of each route section and sometimes along the way.
